How to succeed in MATH 141 (Nathan Reading, Fall 2022)

• University guidelines suggest that you work 12 hours of your time per week outside of class.

• The material in this class will get much more challenging than is has been so far.

• The successful student in this class needs to:

  • attend class.
  • read the text (before or soon after lecture).
  • Put serious effort into homework problems
  • Practice additional problems (for example, from the textbook).
  • Learn from problems on quizzes and tests (using posted solutions).
  • Get help when you need it.

If you are doing all this already and still not getting the outcomes you want, let me know.
